

LET'S TALK ABOUT MenB

A C W Y B

5 common forms

of the bacteria that cause invasive meningococcal disease are groups A, C, W, Y, and B.¹

~60%

Approximately **60%** of meningococcal disease cases in 16 through 23 year olds in the United States are caused by group B.²

*Includes the nongroupables.

ARE YOU SURE YOU AND YOUR LOVED ONES ARE PROTECTED FROM MenB?

- The MCV4 vaccine that you or your child may have received for meningococcal disease **DOES NOT** protect against meningococcal group B disease (MenB)³
- Until 2014, there was no vaccine to help protect against MenB in the United States. Now, there are vaccines available for groups A, C, W, and Y and group B¹

HOW SERIOUS IS MenB?

MenB is an uncommon but potentially deadly disease.³ It's a bacterial infection that can attack the protective membranes covering the brain and spinal cord.⁴ It may lead to death in just 24 hours and survivors can have permanent disabilities.^{5,6}

Long-term impact for survivors of meningococcal disease can include⁶:

SPEECH PROBLEMS

AMPUTATIONS

BRAIN DAMAGE

VISION LOSS

MOTOR IMPAIRMENT

Help protect your loved ones from MenB. Talk to your doctor today about getting vaccinated.

HABLEMOS SOBRE LA MenB

A C W Y B

5 formas comunes

de la bacteria que ocasiona la enfermedad meningocócica invasiva son los grupos A, C, W, Y y B.¹

~60%

Aproximadamente el **60%** de los casos de enfermedad meningocócica en personas de 16 a 23 años en los Estados Unidos son ocasionados por el grupo B.²

*Incluidas las no agrupables.

¿ESTÁ SEGURO DE QUE USTED Y SUS SERES QUERIDOS ESTÁN PROTEGIDOS CONTRA LA MenB?

- La vacuna MCV4 que usted o su hijo/a pueden haber recibido para la enfermedad meningocócica **NO** protege contra el serogrupo B de la enfermedad meningocócica (MenB)³
- Hasta el 2014 en los Estados Unidos, no existía ninguna vacuna que protegiera contra la MenB. En la actualidad, existen vacunas disponibles para los grupos A, C, W e Y, y para el grupo B¹

¿CUÁN GRAVE ES LA MenB?

La MenB es una enfermedad poco común pero potencialmente mortal.³ Es una infección bacteriana que puede atacar las membranas protectoras que cubren el cerebro y la médula espinal.⁴ Puede ocasionar la muerte en solo 24 horas y los que logran sobrevivir pueden tener discapacidades permanentes.^{5,6}

El impacto a largo plazo para los que sobreviven a la enfermedad meningocócica puede incluir lo siguiente⁶:

PROBLEMAS DE HABLA

AMPUTACIONES

DAÑO CEREBRAL

PÉRDIDA DE LA VISIÓN

DETERIORO MOTRIZ

Ayude a proteger a sus seres queridos contra la MenB. Consulte con su médico hoy para recibir la vacuna. Obtenga más información en meetmeningitis.com.
